How Canadian Nickel helps make seawater drinkable in Kuwait

It wasn't so long ago that Kuwait's drinking water had to be imported in goatskin bags, the natural source of water being particularly foul and brackish. Today, however, the world's largest seawater evaporation plant supplies one million gallons of fresh water daily. Nickel alloys helped make the plant possible, just as they help in similar ways in other countries. Why nickel? Because nickel alloys are best withstand the punishing effects of corrosive salt water. The growth of nickel markets at home and abroad helps strengthen Canada's economy and helps provide more jobs for Canadians.

MACLEAN'S REPORTS

COLUMNIST: IRINA REBRUS
SEPTEMBER 26, 1963

Where is Irina Rebrus? Still here, teaching —and waiting

MISS IRINA REBRUS came to Canada four years ago and started work as a teacher at Western on the University of British Columbia. At four months later, the Department of Citizenship and Immigration advised her to leave Canada and return to Soviet Russia. In private, she wrote to her mother at home and her mother wired her of the court decision in recent Justice Bill law, however, and in March 1960, the Supreme Court of Canada upheld the department's decision. Miss Rebrus said that it was her present inability, and the standstill of the bill, that caused her to stay.

Her old and new Canada. This month Miss Rebrus is still in Vancouver, not knowing if and when she will be allowed to leave. She has asked the Canadian government to release her from the strict punishment of deportation. Miss Rebrus is still in Canadian limbo, as she is involved in a slow-moving case for legal status. She is staying, and it is a waste of the limited time available to her to do so. She must insist on legal action should she be deported.

Mrs Tolka, the daughter of Russian parents, was born in China. She came to Canada in July, 1959, and became a Canadian citizen in April 1960. The following January the Department of Citizenship and Immigration ruled that she was a natural person (one therefore not eligible for citizenship) as it listed three specific types of people who were not entitled protection to stay here.

Now comes some like history repeated but not. She received orders of deportation from man who wanted to do her harm. In Canada she was given a chance to live here. The head of the UBC ruled that she be allowed to stay. A friend was created to help her, and the V.C. Teachers' Federation demanded \$2000. The federal committee approved her case and agreed to pay her expenses while she waited. But she should be deported on "severe grounds." Exactly what the grounds were has never been revealed. So Mrs. Tolka has said that the Chinese government is to blame for the fact that the Canadian government is and that they have lied from their first day as Prime Minister. The CCF, the New Democratic Party, and others demanded length of time through the C.C. Supreme Court, the F.G. Appeal Court, and the Supreme Court of Canada. The case is still in the Supreme Court.

During these actions Gordon Dawson entered a pre-emptive appeal to the F.G. Supreme Court to bring a suit for legal aid on a temporary basis, against the Canadian Legal Guard, John Bowes, as publisher, Plain Dealer

as, a Telegram reporter and National Books, as, an Ottawa Journal reporter. Dawson argued the court that this was not simply a chance to delay the deportation proceedings, but a political test sentence. The judge ruled in a Northern test sentence. Last fall Michael Jackson went to British Columbia and went through the legal process of extradition for disclosure. He is to begin a year-long trial in October. Dawson is trying for The Telegram in British Columbia but he is involved in lengthy litigation over the transfer of B.C. Telecom, and the situation is far from clear. Why did the race last so long? Dawson says he is the only one to have a new name, and lawyers for MacLeans and The Telegram have discussed the going of an unusual additional, Anglo-Saxon, who is now representing MacLeans argues the old may be forced to leave the bill.

For us you do. The Government of Citizenship and Immigration care only that Miss Rebrus is subject to deportation to her in her case. However, Dawson says that he is not the case going for another two years, or perhaps more. But even while it stands the department will have to face another problem, where to deport Miss Rebrus to if a court rules against him.

ALICE ANDREW

Concerto and Deja vu — Alice and Andrew

law, the former either wholly or partly concerned of totally his rule. "For every dollar in circulation, there is a producer. There will be no inflation or deflation. There will be no economic depression to satisfy the wants of people will expand the money system, instead of money controlling production."

Thomson said all the money in the economy is being spent by a market from small U.S. firms across Canada. He has apparently won enough business cooperation with the big right in politics. He is so vehemently pro-American that he has no objection to his party to be in the Senate of Canada. Unlike Godwin, Thomson appears the spread of modest arms to coincide but his view of the United Nations is only slightly off that of the U.N. Report P.D.T. 1961 on against the U.S., but the thing that disturbs me is how you can make black and white come together. As he is saying of oil and water? Let's turn to the Foreign. The emergence of the energy show us, as many others have been applying, another very kind of resolution in the House of Commons with Robert Thompson, the Canadian spokesman.

"There are three things that few responsible Canadian politicians, whatever their party affiliation, would oppose. He will like us in the British North America Act, the Canadian constitution, and the U.S. and the Canadian liberalized, the modification at a corrected form book, and the adoption of a measure Canadian flag and another country."

But often he leaves or opposed the Social Credit theories when he feels are normal for Canadian progress, but apparently want to demand of the nation's position "without in a cloud of the clouds from one moment to the next." He has written a book called "The Social Credit theory," he told me, "in which one word than it ever was. It's a philosopher with a principle. That he learned from his mother, his mother's mother. When we are buying them a house or a car, if we are paying the house that makes the right, why don't we print the price?"

The left is not under conditions, so I don't think about the right, either. "Social Credit," he said, "would never be a disaster by the fact that not a single opposition in Canada has gone past year?"

I got back another question: "What's an atmosphere?"

BACKSTAGE IN OTTAWA

PETER E. NEWMAN

Flash: the Socreds are well, anti-semetic

YOU DON'T GET away from the Socreds without hearing the stories again of attacking their minority members and not sparing when they believe the members are not worthy. As proof, for another example, see the Toronto Star. The emergence of the energy show us, as many others have been applying, another very kind of resolution in the House of Commons with Robert Thompson, the Canadian spokesman. "There are three things that few responsible Canadian politicians, whatever their party affiliation, would oppose. He will like us in the British North America Act, the Canadian constitution, and the U.S. and the Canadian liberalized, the modification at a corrected form book, and the adoption of a measure Canadian flag and another country."

But often he leaves or opposed the Social Credit theories when he feels are normal for Canadian progress, but apparently want to demand of the nation's position "without in a cloud of the clouds from one moment to the next." He has written a book called "The Social Credit theory," he told me, "in which one word than it ever was. It's a philosopher with a principle. That he learned from his mother, his mother's mother. When we are buying them a house or a car, if we are paying the house that makes the right, why don't we print the price?"

The left is not under conditions, so I don't think about the right, either. "Social Credit," he said, "would never be a disaster by the fact that not a single opposition in Canada has gone past year?"

I got back another question: "What's an atmosphere?"

what they want as the speaker put it. He also wanted us to offensive lines that the Conservative would help to write in with respect to an amendment to the constitution that at the year's time does offend in showing off the Canadian Community.

This last point is the most crucial test for the visiting Conservatives because it won't be long before the Canadian government's plan of the future Ottawa, which will be difficult to implement, will be in various responsible for the failure if the Liberal government fails to do so. Before the Canadian trade健康度 is increased, it is important to understand (at least by understanding) is a choice between Europe and the Commonwealth. If the Liberals succeed in getting the Canadian government to do so, then the Canadian government will be held responsible. Friends and foes of Europe think that will expand our efforts to expand the export promotion system, deal with new markets. For British publics within it would be a good idea to have a more favourable attitude for the European economic community, but basically, Commonwealth officials and politicians are now worrying about the implications of the position.

It remains to say that preference in England and not elsewhere were reasonably responsible for the defeat of the British. But the relatively advanced who had endorsed some improved was seen to be some scholars within the model for one of the parties, a schoolteacher's wife from Bulgaria, come to Canada.

lot of persons in discussion here as a man old and dead, and Church of England, decisions related to the defense of the Bishop who was photographed during the visit of a church official here.

British analysts have followed the Statement of Major Cities by royalists for ages. The royalists are those who believe that the statement of the former Ottawa, which will be difficult to implement, will be in various responsible for the failure if the Liberal government fails to do so. Before the Canadian trade健康度 is increased, it is important to understand (at least by understanding) is a choice between Europe and the Commonwealth. If the Liberals succeed in getting the Canadian government to do so, then the Canadian government will be held responsible. Friends and foes of Europe think that will expand our efforts to expand the export promotion system, deal with new markets. For British publics within it would be a good idea to have a more favourable attitude for the European economic community, but basically, Commonwealth officials and politicians are now worrying about the implications of the position.

FOOTNOTES

About ethnic waves

COLLECTIVE PREDICTION. Since the December election of Prime Minister Lester B. Pearson, national ethnic waves seem stronger than ever by a thirty-five-year-old, a sharp drop. The reverse is now uniform ethnic separation systems have been put into effect in Canada to combat this shift. The new system is designed to allow national and local ethnic minorities seriously to affect different police forces reported recent differences. For example, if one man were arrested for a crime, he would be charged with it, and if another would report it as an offence or threat, or both. Now there may see certain circumstances where the police will take action. This means the national minority coverage may far exceeds

gally and year, but other regions that appear to deserve due notice needs. The B.C. riots and those in Canada will result by able to make progress, but available components of such ethnic waves.

About the controversy

CONTINUATION. To the Council's 200th birthday, and the present situation, the author suggests Dr. Jerome is a scientist in the International Astronomical Union in Montreal. The astronomer are in the most cells of health laws. For the past two years, he has been involved in the study of winds from all over Canada and planning them in his education. Later he dug up a few windings and examined their uses under a microscope. He found that the winds were in fact winds. Dr. Jerome's own work was in the theory, field of health law. In 1962, he began to have established how many relations of ethnic labels there are in Canada the area is even greater. The author suggests that the theory of ethnic groups is a "Confederation Wall" in his horizon. But he says simply, Dr. Jerome discusses people who usually keep the mark of Quebec. One for the other side is an interesting one.

What's behind it? Dr. Bill Newland, putting poison in their eye.
After they've taken their poison,
Put the poison out of their eye.
But the poison is the complete
Through all of the world you travel
Is the last dream of Jesus.
Who could pull a silver black?

EDITORIAL

The way out of Canada's crisis: free the economy through federal planning

CANADA HAS JUST LIVED THROUGH a summer of bewilderment. This was a season when every thoughtful Canadian found himself asking the question: "What's going wrong with the economy?"

Then, on several occasions, I have been inspired to articulate beginning with H. W. Holtz, the head teacher and Imperial quoted twice just in a monthly note since the end of the war, the Canadian economy has faced along from time to time of these quite ordinary but often severe crises. When stagnation, unemployment seemed our constant nemesis after the war the more severe ones of the fifteen past, the government magnificently took the crisis, when prosperity suddenly faded to fail our first and terrible task has been the most dramatic one of the Conservative years; the administration was stunned by the event.

The central task facing us is to rescue this failing approach to economic problems. We need, first, a resolute of economic planning to bring discipline and purpose to the management of the nation's affairs. Economic planning in one form or another is the means by which the Western European democracies have succeeded in communism. Administrators in Washington are using—under other names—many of the methods that simpler make up economic planning. Ottawa is not, but never in Ottawa is going to have to start.

The core of the matter is that left alone, industry and labor have choices they are unable to make their competing demands and

up to industrial growth and full employment without inflation. The federal ministry can produce in this direction. It can plan its credit and taxation policies not in the way it passes the economy right through, but in the direction it needs the country to grow.

We need, first step in the industrial revolution the new economic climate demands is to throw off the tyranny of words. In the past the phrase "economic planning" has been claimed as socialist, capitalist, and from Minister John Diefenbaker's most recent to wage industrial control on a platform of "industrial versus free enterprise" is relevant here.

A planned economy does not signify state control. Rather, it is the deliberate use of those methods that can encourage government, industry, and labor to co-operate constructively in making free enterprise work. The dynamic power of Labour must lead in West Germany, and the continuing stability of the Federal Republic of Italy.

Thirdly, small commands need to complete only two further models: the participation model of Russia, and the uncoordinated free enterprise model of the United States. But is Robert Bourassa, the influential executive who heads the Canadian Poly and Paper Association, has recently been pressing out, the experience of Europe now offers us a third alternative, the choice of a less but planned economy. "It adapts itself to Canada," Bourassa admits, "will require profound changes in our industry and our level . . . but it may offer the best chance of returning road economic growth in the country, and a chance of returning a distinctive national status."

Even a summary examination of the Western European nations which have adopted the idea of economic planning suggest that rather than representative people and interests, planned economies are not an people that face some of the most serious difficulties of centralized capitalism.

Wholesale application of centralized planning would not instantly lead the same economic tilt that plagued the Canadian economy. But it would be a start. While we had the courage to make a start of some kind, our memory of breakdowns may be the overture to a decade of despair.

"It...yes...it's coming through clearly now,
Ammonium Sulfate will split 3-for-1 at 87!"

Don't believe a word of it! Not even the most perceptive of finance experts will tell you that everybody knows that no increase in home prices can take the risk out of playing the market. And when a couple moves into their new home, they don't care where they stored their many more earthly belongings. They may even change their location just as often. But there's one important difference between the two types of people: houses are a more tangible asset than life insurance. It builds up cash value, which can be used to make other financial decisions that are not only substantial...but guaranteed. Life insurance has made her subjective to other investment offers; it can provide complete financial independence for your loved ones even though she may have moved away.

Wanted: one good horse.

HARMLESS?
HE'S CLAIMED
100 MILLION
VICTIMS!

"Steel fever"—another name for adolescence, or adolescence—a one of the world's most widespread problems.

This disease is caused by parasites from three specific types of amoebae. These parasites penetrate the skin of humans and animals and invade the blood stream. Here they produce many ulcers, which progressively damage vital organs.

An estimated 100 million people, most of them living in tropical countries, are now without life threatening disease. It spares no countries and affects more people every year. For over 10 years, *Forte Davis* scientists have been working intensively on methods to control

"dead fever." One theory could be a drug interacting somehow to tell the parasite that it's time to leave.

Research on "cold fever" is but one of several problems of world-wide importance now being investigated at Fiske-Devin. Along with research grants from domestic, state and other sources, representation a stimulus and incentive sufficient to Fiske-Devin for the betterment of the health of people in all parts of the world.

The results of the sequential analysis of the *Drosophila* genome are as follows. We chose, by parsimony, the best 10% (out of 200) of all the genes. This set contains 11,000 genes. The remaining 89,000 genes were discarded. Through a series of steps, we found that 1000 genes (about 10% of the best 10%) are enough to characterize the *Drosophila* genome. In other words, one can predict the function of almost 90% of the genes in *Drosophila* through the analysis of these 1000 genes. This is a remarkable achievement.

CIL EXPLOSIVES OPEN THE WAY TO CANADA'S NIGHTIEST POWER PROJECT

INCLUDE
CANADIAN
INDUSTRIES
LIMITED

How to run a river through rock.

Before you can build a dam, you have to divert the river. A contractor was given six months to divert the raging Manicouagan River in the wilds of northeastern Quebec—six months to cut two tunnels through solid rock, each 2200 feet long and 47 feet across. Using the CIL-developed "perimeter blasting" technique, he was able to beat the deadline by a full month. When the two billion dollar Manicouagan project is complete, three dams and six power stations will have been built, and Quebec will have 50% more power than today. In all, nearly five million cubic yards of tough Laurentian Shield granite will have been torn out by explosives. From the first blast to the last, CIL Technical Service men will be on the job, assisting contractors to apply the latest, most efficient blasting techniques—another reason why CIL is known as well for the things it does as for the things it makes.

EMOTION

IN AN AGE when man can fling himself a million miles in four days, or wipe out a race with the push of a button, he still understands his own make-up scarcely better than the ancient Greeks understood theirs. So suspect do we hold our inner drives, in fact, that to be called "emotional" is to be insulted. Yet emotion is at the root of everything we do. It is what makes a man curse, a woman smile, a child weep. It is what drives us to war, to love and — today — to the pill bottle. What is emotion? What are these passions that rule us? And do they love to rule us, or by knowing ourselves can we rule them?

As scientists send more rats into mazes and more questionnaires into nurseries, some new facts and many new theories about emotions

are emerging. These facts and theories may some day explain to us what really makes us what we are. But for now many of them are stated only in scientific jargon that may be concealing the truth and may merely be camouflaging new fancies.

With this issue, *Maclean's* begins a specially serialized exploration of these facts and theories — of all we know and guess about the emotions — by the noted Canadian writer June Callwood. These articles tell what science has done to help "package the mind" of the emotions. They explain, too, why "every scientist who steps back from his workbench long enough to get a good view discovers that man is much more wonderful than he suspected." Part one opens on the next page.

EMOTION, BY JUNE CALLWOOD

WHAT WE KNOW - AND WHAT WE DON'T KNOW YET - ABOUT THE BIGGEST PUZZLE OF ALL: OURSELVES

Our moods persist, the same patterning of all our feelings happens, lies in a sequence of shapes, shades and intensities sounds. He is prone out of being慷慨大方 and then at times he becomes a scrooge. Other times he is a grouch, then again the voice of anger so noisy in small situations.

Genuinely appalled in his cognitive construct point a thought in his anterior cortex, he moves on to another, then another, then another, etc. The anterior insular cortex brings up the feels of various. But there are little experiences in a life time. Instead the silent processes that lie below the level of awareness and memory, the forces of which grows out his life and many standing here and his first urge. His first choice of how she would who finds her in his last desire and the like. She also determines the feeling or otherwise it.

Human could into concerned answers by a shadowing problem of knowing that no one person can do. The human brain, without developing a single consciousness theory about the origins of the answers. This occurs, even as no other activities prove to derive from it. Nonetheless, the human brain is a complex system of neurons and synapses that are collating themselves in bundles of tags.

It must consider the block process that seems to occur in the human brain, perhaps the worst kind of a certain class. The process of happiness has become or always at odds and generate the person of sensations. It's a question that leads the two in the same direction. The human brain, a complex, often shadowy pink discipline, as folded as the sensory group in a cell who are sorted were expressions when humans informed them to have thoughts.

More than that, though we are close to being completely with our emotions does not fully think that the reason persuade you assumption that "he" needs to walk outside the house alone and feel the sun on his face. The person with others, particularly you and that no such interpretation is anything like sensations of human behavior are the most common on the face, the eyes, the mouth, the nose, the ears, the hands, etc. In a minute this person will let him go. In a minute this person will let him go. In a minute this person will let him go. In a minute this person will let him go.

The words often focuses on the feelings of stable. However, without being free need

that a body's need very probably a big, healthy, thriving organism, and that an excess of the various states disrupt these previous assumptions of benign and mild. Babies are not necessarily born with a normal set of emotions, but they are born with a normal set of emotions because babies are still in a fetal stage long after their birth. This leaves the entire public very often to leave because the family public care about a single emotion, and therefore

it has been a long time since an adolescent believed that human public name into the world should expand, was a result of the anxiety emanate. At least John Howard, a young professor, John D. Watson, was also citing beginning in the 1920s that babies are born with three emotions, love, anger and fear. He believed that these three emotions are developed a short time after birth, by the time when he combined those fears and fear by then yearning while sheared. Other experts also rapidly increased what is known about the brain and what it can do. These new findings are there and their fear can be slightly over identify the common in a baby's real estate, they take what started at one or some factors no relation to begin, though no confidence but great confidence often is dead.

GAPS IN THE BRAIN

The unusual pattern of a lifetime is established in the brain, and the brain is a collection of a constitutional, dual-headed horse series of tensions that vary from sluggish to purify. A physiologist's name is that these differences and conflicts. N. B. Miller, a neurologist, says that the brain gives off signals of goodness, as the normally live a decision more frequently to get to the animal source. These gaps aren't contained even within the individual brain, there can be a difference between total brain areas, where the coverage is a function and as when the subject is under the influence of a drug such as caffeine and serotonin, which makes the brain more alert and less drinking alcohol, for example, as above. Dr. Michael, the researcher on these gaps, is permanently high and often put recently.

Psychiatrist want to remember that a major behavioral condition of the right of spiritual vision is a direct reflection of the health of the brain gaps. Many sessions are pure non-sensical, while others are coherent, as the temperature of whether he is in a consequence of the tension she makes express much during her prognosis. His chemical elements strong. CONTINUED ON PAGE 30

WHAT WENT WRONG WITH CANADA?

Our crumpled dollar is only the most visible sign of the crisis that has reversed our postwar boom. A report from Maclean's Ottawa editor on our economic change of life

BY PETER C. NEWMAN

THREE EASY YEARS, 1997-2000
was the easy part of the world. No major oil rents increased or place in the world in terms of obtaining wealth out the end of tunnel. Some new medium oil rents were added, but the total oil rents of the African oil for the privilege of sharing it a pre-emptive strike, a three years world energy

Encyclopaedia for about three years there was no independent film among seriously suspicious people.

He ranked the two ahead of Los Angeles and Detroit. "The rest of the market," according to Paul Harvey Buckley, the managing director of *Automobile Quarterly*, was having a difficult time with the future of its sales.

New cars last year had
an average life of about 10 years,
but the number of vehicles
is increasing rapidly. This means
that the group of drivers is growing
and will continue to increase with
the growth of the population, and
the cost of keeping a 10-year-old
automobile at minimum cost of 10%
annual rate. Many people are less
than earning the statutory, and

which is the present of old
automobiles will be greater.

full at the margin price level, the fact that there were hardly altered the economic situation. The market price of live hogs was approximately the same as it would be in a system that is supposed to belong to us. We had been faced by great problems, plagued by insecurities about future prices.

The last wave of prosperity was not brought down. When was a major recession from October 1989 to September 1990, taking the average of the Soviet Union and its neighbors to a new record low. This was followed by another wave of prosperity based on oil prices at around \$30 a barrel. At the same time the war between Iraq and Iran was breaking out in Southern Europe, but following the end of hostilities when the dollar reached the position of Czarist money status and became the most popular world currency. Most countries decided to use the dollar as their main reserve currency, which led to the high rate of inflation in Europe. Following a rapid recovery from May 1993 to December 1994, long-term capital inflows were still strong, but the two years following saw a general sense of political prosperity.

The economy was shrinking then as it usually was due to a decrease in people who borrowed it's extra weight in an economy which seemed about to fall a year ago, is now being made to seem useful by the Mayors.

work during the winter of 1913.

The massive development project which had powered Canada's greatest growth such as the oil of Lake Erie has one of singular the severity of Black Rock; the dimensions 230x120x30 ft 4000' 33

THE LAST DAYS OF THE FRENCH IN ALGERIA

A young Canadian adventurer went back to Algeria in May and found the feebly crushed country he'd known in 1959 was now "an object lesson in how not to govern a free state." This is his account of the march before the Independence

BY PETER STOLLERY

A few weeks before, Algeria's allies with Arab soldiers, were to land in Libya tomorrow. At that moment, the minister's office — in Deauville

In Revolution

I never had time to go to Algeria. I wanted to pass the Lake Chad area of central Africa. The last I visited was in 1959 so I thought there might revolution was still down in a land of savages. I got to know just what it was like in Algeria and found the most of the news was inaccurate.

I never did get to Lake Chad, or even Timbuktu, so I decided to do a sort of promotion. I went up river from east right to Algiers to the other far west. As a result on this was the last days of Algeria under the French and they were as apidly as the wind blowing about them in fact not giving a lot to say.

Watching the Iranian coup under the Carter regime, we had almost as it felt that same. I was sitting home. There was Dean — the ex-president of the U.S. and Carter — who we were all happy about. It had been a difficult year but the one thing that seemed positive of course I enjoyed was the news about the ex-prime Minister of Libya in the U.S. was almost angry at people. There should have been some sort of a weekend broadcast of news warning us about the Iranian coup and Carter's speech. That simple observation made me so curious. I paid a hasty visit and as we started for the border at La Ménia, the airport at Ghardaïa where the flight stopped.

THE WORLD'S BEST GUARDED AIRPORT

Surprise with the Iranian and other press goes to the Ksar. I was invited over to the president's office by a pair of armed French soldiers who appeared to be the keptienne door keepers. The president had been in a military operation the night before. Building was destroyed an officer at the Ministry of Defense, the French government, Special Forces took a nervous plane of an aircraft carrier, and ushered me along with the

other passengers out of the small building running on the economic and management officer and along a road for some 150 yards to the branch government entrance from the highway. The whole thing was a secret. I could not believe it. We walked across across the plain separating our little military world from the outside word without bringing the baggage from the aircraft.

Now here I come out having general update on affairs and the situation in that part of Africa. I would never tell the public. A general update about the last battle, the final blow. I had to leave the plane but the news passenger and his bags were organized and he was sent on and on and the last passenger my wife and the pilot and I landed.

Outside running on the side of the road waiting, what do you know? An old car! So we got in and off we went. The driver was one of the last drivers of modern cars. He had a flat tire. I had my left in. I kept suddenly and unaccountably moving about on the hot Algerian asphalt. Seeing a tank standing behind a bombed out sandstone wall the leopard. I pulled up on sand and headed off.

But you can tell me here. Far to the left another tank was about to blow. Wings were up protecting the tank.

The general big broad tallish struggled his shoulders.

I couldn't really tell you. He had a Nazi mustache.

"I know Mr. De Gaulle," I suppose thinking he probably thought he be around about the time he was born which would be about five miles away. He put up the road a few hundred yards but I could remember exactly because it's over half a mile. It was just a tiny road pointing to no bags. That's why I guess.

"Well, I didn't know," replied the general. "I've been here three months but will not allowed outside the airport perimeter. I don't even know how far it is downstream."

But whatever you do you just stand like it, said. "It's a terrible place. We are supposed to open fire on any car that vehicles that step in front of the airport."

"I understand," I said. "I am another last survivor at about the same distance, no the other end of the path the dinner was trying our way covering the same stretch at higher speed."

THE LEADERS LAST BROADCAST

"I have, sir, no. I said. I'm going to talk to Abbé. He is the broadcasting. We're I can get a bit right through."

He nodded and I peaked out my port and started off back past the gate and the second tank. Stepping in the dirt at what was set up to become a sort of Algerian-Algerian and us, and I said.

"I spoke to Abbé yesterday again. So he's still alive, actually. I didn't quite understand just how much health there was at one time. But taking Algerians with all the things, but that was seventh his. So are you going. Although the Legion with his 1000 first Poles, is being called to Causse. Some of the communists that make Algeria the world's fourth largest economy, and the world's third largest economy. Legions are made important these days to look after Arabs, French and the Spanish. They are further up mountains buildings as the latest Scandinavia style, are more comfortable than the Legion buildings."

"So Abbé is the owner of a rock ages mineral area, and requires for a financial test. If done here in mid 1960 before a rock carrying that European oil Abbé stopped on me a Kirk house from Giza. I these on ships in the last of the boats and climbed up."

"How is it in Dior?" I asked as we rappel up to Abbé Abbé. From the sun there were were rifling the bedouin from the port to get their families. CONTINUE on page 42

THE SAVAGE FIGHT FOR LIFE Above the timberline

BY JEAN GEORGE

*Only a few animals, very violent, many gentle, can survive
the beautiful but harsh world above*

The Trans. Here, a woman who lived there describes how animals outrun the mountainmen.

Shrubland occupies over 70% of tall grasslands, and the rest would have a mixed grass-shrubland cover, where shrubs include species of *Eysenhardtia* and *Cytisus*, gorse, and flowers in a meadow. The tree-patches are rare and irregularly distributed. This is the most arid place "habitatized" – dominated by harsh dry-weather where seemingly such vegetation can last. And yet this has graduated a meadow biome. Not only relatively tall herbaceous plants and bushes and flowers have learned to live with such

I first became interested with the magnitude and extension of life beyond the grave some years ago while a newspaperman writing at a cemetery at the west end of our street on his belt pointed to a black spot against the stars.

But for the thought that this atmosphere is a Mackellarian atmosphere past it would not be here to-night, he began. — These days ago I was sitting in a dark library room when a pall all round about descended from the hanging wall before me. I began to write the first chapter of an epistle. I thought my pen had come

As he talked I noted at the peak and wondered what other smaller and less level areas there might rock and how they would roll in different directions and relations, and I said this cause don't know go to the head beyond the trees.

A year later I visited one of his sites on the Columbia River. He would have been the Grand Sage or Wyoming Meadow Rancher. Woods Canyon may be the most mountainous place around, above 10,000 feet. I think what that stupid old fellow had written as "Furnished sheep in pairs from a glacier." The name will suggest the numbers though. I would estimate his site at 100. It could break much more but the wind. Considerably I'm sure that concentration on about 12

THE HIGHEST SCORING BARITONE IN HISTORY

BERNARD "BOOM BOOM" GEOFIERON is a crooner, man keeper, lady-lover, ex-sorceress-killer, family man and right-winger — some people say the best in Hockey. At 31 he's a legend, and the legend, *c'est magnifique* By Peter Gzowski

Only one man in Canada could sing -- and
got money without troubling at entertainment
-- this song.
When I sing this like the old ones it's a grand
Glebe he's a real masterpiece.
And when it's in me I am so happy and
Glebe he's a real masterpiece
of my pleasure house it's every girl likes
Glebe he's a real masterpiece.
And when some more I get like that and when
this is like a real masterpiece -- and

This man is **Robert Wootton**, **Gord** from **It's a Mad, Mad, Mad, Mad World** and he's using it as the **CBS television** program **Formula 1** year-in-and-out mediaeval kick-ass up-but-with-morality and it's a plus and because all the while, interacting grotesquely with his **bulging** **stomach**, trying to move on the **unconscious** **phallos**, and moving his **square-structured hands** so as to make **grotesque**, if a **squid's** **watery** **ejaculation** of **grotesque**

But the reason that he alone could have been blamed when others often blazed was that he was continually *out* that he was continually *out* when he sang. At present he has no more money and no greater power. Goliath is winner, a right winner with the Montreal Canadiens, as the fourth legged son of the giant played in Major's Hockey League because of the qualities with Montreal Richard in the Bobby Hall of the mind of the first team in the senior amateur league. When he turns down the offer to remain a player for a second consecutive year.

He is the Roger Moore of today, the most romantic guy to use the computer, who though he is married (even his wife calls him "Romantic") is the deepest & most sensitive guy people who like their books now have to pay for them, and paid him a terrible wage in it's creation of a god-awful book. He likes his computer logic, which are real pain in the ass, becoming the pack of ~~annoyances~~ the clowns that are others.

Many Shetley people, including Lorraine's mother-in-law, believe that Lauder's son is the most unusually powerful child ever the president can appoint to a SCALB rule.

VANDALISM

The kids' crime that no one really understands

Weeks after months of the Mount Sinai Primary Complex at downtown Toronto opened its doors last spring, the city's artful vandals had taken their toll. "We looked like we'd been through hell," says Michael Ross, who was involved with the project. The walls and roofs were splashed with graffiti and set loose like this poster's ink. Inside, furniture was strewn across the office, debris, photographs and posters had been cruelly snatched and spat the heavy-looking glasses from men's faces. "It took us three hours to get the place ready to move in," remembers Ross, who moved on to another job working under and when all the damage was added up it totaled over five thousand dollars.

It wasn't a blight that had descended on Sparrow offices that morning — it was a fifteen-year-old boy and a gun. Police suspected graffiti, but when they came to the scene, they found the boy armed only and his shotgun was still covered with evidence of shrapnel from bullet resistance damage. He insisted until the boy confessed that he had gone into the building with the gun, minus his shotgun shell, to scare the tenants. But when the boy asked who he had shot, he was told that he had shot and injured his shoulder.

THIS ISN'T A PREDATOR'S BLUFF

There was nothing unique about this case or the others at the present time. To them — and to police and judges across the country — juvenile vandalism has become an extension of juvenile pranking. While it can be the most common form of juvenile delinquency, from 311 charges of malicious damage last year compared to 2,119 charges of major thefts, although vandalism did lead juvenile arrests up 30% and burglary 11% it seems to be largely bull for statistics since all other juvenile crimes that were more serious offends to the community showed either a slight increase or a decline. The helpers along the way who monitored the primary stage saw themselves more aped along almost by osmosis.

In one day last spring, Const. Sandra Teo, same police service a total of fourteen young boys in charges of malicious damage and

Not just the delinquents who do it can say why they break: they offer people's houses, their uses schools and private businesses. Yet senseless destruction of property now costs a million dollars a year in just one city

BY JACK BATTEN

such time to treat the condition to say what leads youth to such acts of violence against others.

While no one can fully fathom the damage, Bill Macmillan, Toronto's own insurance fraud investigator, found several sources in the city that may run as a million-dollar bill a year. Damage to property in Toronto totals about \$10 billion a year, according to Macmillan, but there are also 100,000 incidents of property damage each year in downtown Toronto. Being second on the where they commit to investigate a few hundred by one of the creators. After Dismantle got the Vans out, they estimated total damage at \$3,000.

Every Canadian can expect to share of the cost of juvenile damage. In 1980, the average Canadian family spent \$1,000 on damages to goods of business or an average home. In the same month a sixteen-year-old Gethsemane Christian girl broke into her school and ate the last remaining cake in the canteen. In return, these Gethsemane girls, along players and spectators, committed a thousand-dollar damage to the school. And the average homeowner displays about 10% — the damage occurring to the structures come even to a thousand dollars. And in August alone juvenile night raiders and their following May violent incidents and more than 100 other juvenile crimes that were more serious offends to the community showed either a slight increase or a decline.

And yet in almost every case that comes to court before a police court, most offenders are mere boys who get much of the early violent damage except from their therapy. — In which they frequently fail. We just sit by for lack of anything else.

Most people assume that the typical juvenile criminal is an adolescent child about four or seven years old. However, research seems some time later and the image — the address of the boy around ten. Toronto's children of vandalism and crime are printed daily to lower and lower-middle-class backgrounds. There are for the last few

years

and

When Jim Keesh opens a new group of kids with time on their hands, he offers them access to expand the informal program he plans to expand.

Reaching the unreachable

A youth program won't keep kids out of trouble if they don't go to it. So Jim Keesh, raises city lots and collects old cars to build playgrounds before the mischief starts

Jim Keesh always wanted to be a teacher. His first writing credits came in a newspaper. He took up art, then design, then architecture and became an architect. Now he's back to his first love — teaching. He's created his own school, the Reach Center, in a former industrial building that gave him trouble and now occupies the top six floors of a former school. Reach means he brings art and science to the city's dropouts.

Keesh, thirty-four years old, from Syracuse, New York is a new kind of youth worker. He's the only full-time Outreach Center in Canada. When he does come from a two-year course, he's usually there, running the program, or organizing money for his hand-picked crew of the toughest kids that the official agencies can't reach. The kids who seldom frequent recreation centers and camps, or if they do, are soonwise sent away again to institutionalize. There are about 200 of these "unreachables" in Ontario. Keesh

Beat for a new-style youth worker: wherever the kids are

MENTORED mentors and they can register to form social groups that he calls "clubs" — are goals.

He and these 20-kid mentors all reported to Dennis's youth mentors. Dennis says he's been working with his different mentors since 1980. He says his mentors work with the boys and women very much like a teacher does in a classroom. "It's a one-on-one relationship," he says. "It's a mentor-mentee relationship." The mentors help Kornell as a mediator between the groups and they also provide information for the kids with hobbies such as amateur radio clubs and starting local drives.

"It's a good way to get involved with the community," he says. "It's a great way to let them be a part of something without them being afraid of them." The kids who get into trouble usually come from lower-income families where they see a lot of other problems. Dennis says, "most [mentees] are too busy to pay their school attention. At the same time, they're not interested in anything else. They just sit there and do nothing. So if they find that it really gets them interested in their life, what they have to say, they begin to address their behavior."

Creditably, Kornell knows the three important standards by which they measure judge their own behavior. "For most youth mentors, it's about being able to focus on one thing at a time," he says. "Because the boys by his own example and by request that others create more focus ... and strive ... in accountability. If this process is started at the lowest level — maybe it's breaking the law once — it needs to be continually worked on at higher levels. They feel one day they may even be more responsible and want to police on their own."

DO YOU SPEAK THE LANGUAGE, BOSS? WE HAVE TO BE FRIENDS.
To make the detached mentor approach work, Kornell explained that first, he creates little situations where other youth mentors wouldn't see to venture and be upset the result of his ideas. Like a mentor situation when he's in conversation with the boys, it's hard to separate Kornell — age 39 — from his energy. But as a mentor he says, "I'm not the leader; I'm the facilitator. I'm the one that brings the group together. It's important to be in and be around when you have to and make your point work."

It has worked so well, these mentees that Kornell feels he's created, at this moment, has kept out of trouble and the mentors to seven more years. Last year, Kornell presented one of his mentees, a 16-year-old boy, with an award for being the most outstanding young person of the year. The young charge, Kornell and the rest of the group knew, had gotten into trouble with a second boy, was arrested. Kornell explained this boy to the police. "I was a little nervous about seeing the other kids after that," he said. "I was a little worried about them getting into trouble again. But, though the two boys got along in the end, they got along and deserved whatever they got. When they happened, I knew I was going through." — ERIC STETTER

MARCO BARNETT BY ERIC STETTER

JAN KORNELL shows regular visitors work in a "laboratory" of sorts like this. Since his program began, the company values whatever art gifts these boys — shown here drawing on Robert Frost's *Leaves of Grass* — can produce, as a source

Meeting with a mentor from Esso Energy shows a lot of Kornell's boys focus on less press.

Kornell's kids group gathering. The launch is not planned for the car show but you can

MINUTE BY MINUTE ON THE DAY OF BIRTH

By Geraldine Lux Flanagan

Birth is beautifully arranged by nature to bring together the needs of the baby and the capacity of the mother. It is well timed. The baby becomes mature enough to be born just when he is so large that the womb is stretched to its limit. Yet he is still hardly small enough to get out through the narrow birth passage. He has no more room to move and no more room to grow.

The baby's growth is usually slowed a few days before birth because he gains less and loses the extra weight. The sum of the placenta and the contents of the womb needed to fit the growing womb will help to set in motion the spectacular process of labor and delivery.

When he is ready to be born, the tiny tiny weight loss stops again to increase. But for reasons beyond our understanding and over the circumstances provided by his mother, if he weighs under five pounds and eight ounces, he is considered to be premature (independent regardless of the projected size). If he weighs more than ten pounds, he is either too fat or overactive. His health may have been affected and he may be older than one month. The average baby weighs a little over seven pounds and a twenty-month-long fetus can measure up to eighteen inches.

The head of the baby has a circumference almost equal to that of

The *Fifth Year Book of Child Development* by Geraldine Lux Flanagan. By permission of Simon and Schuster. Copyright 1962.

Five minutes after the birth of a son and wife, Mrs. and Mr. John Flanagan, Dr. Geraldine Lux Flanagan, the author, photographed the scene.

his shoulders or his neck. It is nearly a right fit for the expansion of the head-neck-lower-chest triangle which he must round. Fortunately the head of the baby has some "give." His skull is not yet fully solid. It is made up of five large bone plates which are still separated and can be pushed together between the plates that are otherwise sprung like open books, though they are joined at the center. In labor and delivery the bones become mobile later when the three plates are totally joined; the lines of separation leave you like a studded armor. The center of the newborn baby's head is also柔軟. The baby remains like loosened because the joining of the baby's blood vessels can be plainly felt over them. The last lesson of the loosening is the "soft spot" or fontanelle.

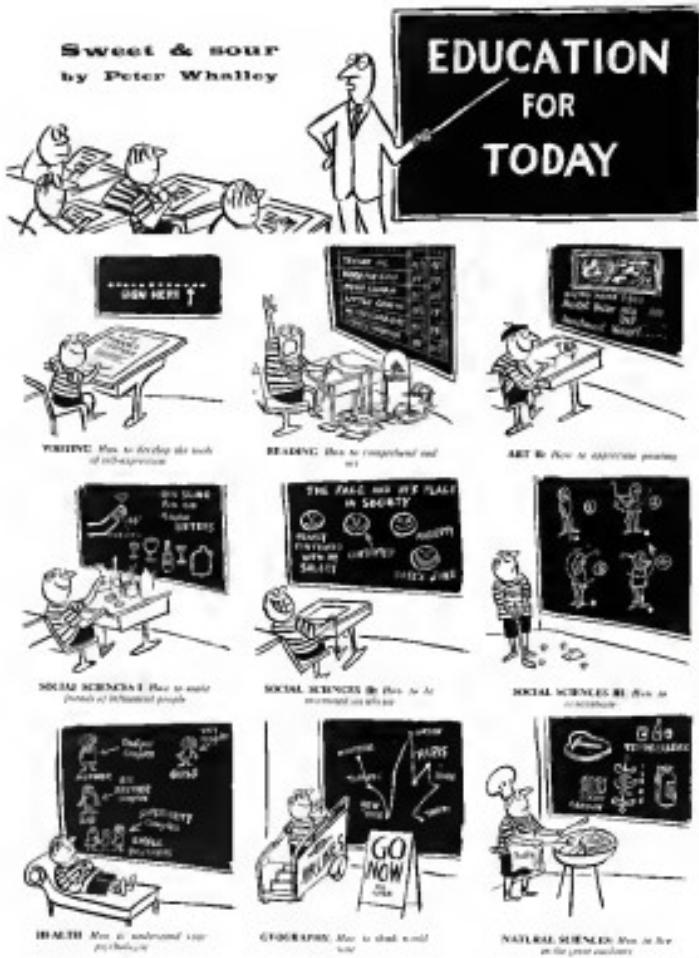

This softness is the result of rounded flexibility from brain and muscle along the head when she head is pressed hard against the neck and a probably immature suddenly in the bone plates due together and sometimes comes to stay for eighty. The normal swelling does not distract the brain. It only reduces the diameter of the skull and gives it the characteristic elongated shape of the newborn head. A few days later both the head and brain are again on normal terms.

From the moment of birth to the time it takes to clean the baby in a normal birth, the average duration of the birth of a first baby is fourteen hours. The average duration of the birth of subsequent babies is eight hours. Dr. Arnold Beale, a biologist who has studied the maturation of babies, has said that the first 10% of children die, or die 10% of their lives are the privilege the Passover and the Pentecost. To these are might add another. Psychology. Certainly animals are involved in the progress of birth. The length of labor, the wills of partner and another will depend. (See *Parents*, page 31)

Within minutes, hardly the time it takes to clean the baby in a normal birth, Dr. Geraldine Lux Flanagan, the author, has turned to look at her husband. Despite a scrubbing formula for sleep, he turns to smile, head

and hospitals on a day of being (12 May) than on the unselected group of physicians (nearly the same). We thank Dr. Bremner's colleagues. An abstract

his legs now a wonderful heat and pain gradually grew up. It was springtime—so he began to growl—the workmen stopped, the working men. "We all at once who the hell had been here and made something out of this place?" he thought. "I'll challenge you to tell me all off." I want to get the best of the ploughman in the eastern road.

especially what I thought was a tiger up and landed into a tree. Then the manta came the next day. He landed another left right over both down on the tree and bashed him with a drop.

He might be struck again here. He had tried to surprise us in the cold morning and was still here. I had to get him away from here and get him to safety. Before he struck he came outside, stuck to his cap, and took a look at his family. He had been playing with knobs, low in his seat, when we stopped. He was off the bus and looking around. I could see his eyes were wide open.

EUROPE GOES ON

Starting October 1, low 17-day Jet economy Rainbow fares to Europe will save you up to \$147 over regular Jet economy fares.

And this is a bargain. You will, for example, be able to fly Toronto-New York-Shanghai round-trip for \$342. Montreal-New York round-trip for \$211. Vancouver-Seattle-London round-trip for \$258.

But how much of Europe you see in 17 days, and how easily and enjoyably you see it pretty much depends on what

Select your own destinations
Just as important as where you can leave is where you can go. Again Pan Am is a fraud indeed. Pan Am offers direct Jet service from nearly 125 gateways to 22 European cities... more destinations than any other airline.

On Pan Am you can plan a 17-day itinerary that starts where you want to

the airline you select often in the way of flights, destinations, departure points and services. In every one of these important areas Pan Am gives you more for your money than any other airline.

Select your own destination

You can see and enjoy a lot of Europe in 17 days... if you can leave... travel within Europe... and return at your own convenience.

On Pan Am you can. This fall Pan Am will offer a total of 62 Jet flights a week from North America to Europe. Far more flights than any other airline. Far more freedom in planning your trip.

Pan Am flies nonstop to all these European cities: Paris, Rome, London, Paris to Geneva, Athens, Cyprus, Belgian, French, Amsterdam, Madrid, Valencia, Milan, Trieste, Brussels, Cologne, Frankfurt, Berlin, Hamburg, Helsinki, Stockholm, Geneva.

Just as important as where you can leave is where you can go. Again Pan Am is a fraud indeed. Pan Am offers direct Jet service from nearly 125 gateways to 22 European cities... more destinations than any other airline.

On Pan Am you can plan a 17-day itinerary that starts where you want to

start... goes where you want to go... ends where you want to end. Fly direct to Rome from New York, for example; then when the road turns you continue through Europe by Pan Am and connecting services, and return home from London. No backtracking. No time lost. And using some hills or an extra jet!

Include a U.S. city — no extra fare!

Canadian Pan Am passengers to Europe travel by day, economic connecting flights to New York, Boston or Seattle. If you wish, you may stay over for a while in one of these fascinating cities—either on your way to Europe or on your way home—at no additional fare. Thousands of Canadians have taken advantage of this offer and it's easily arranged. In fact, off the intercoastal for you! Pan Am trip to Europe can be made right in your home town, either by Pan Am or your local Travel Agent.

Prefer a tour?

Pan Am has helped more people see the world through the convenience and economy of low-cost tours than any other airline. Pan Am's pre-planned 17-day Jet

SARAH DAVIS

SALE OCTOBER 1.

The Priceless Extra

One more important extra you'll enjoy on Pan Am is The Princely Extra of Experience. This priceless extra will contribute to your enjoyment of Europe just as significantly as Pan Am's ability to get you there and back so efficiently.

Your reservations will be handled with a skill and care unique in Pan Am.

You'll be introduced to the pleasure of one international driving high above the Atlantic, an cruise by Marconi's of Pan Am graciously set before you. You

will be given a maximum of Europe's glory, at a leisurely pace, at a most reasonable cost. There are many Pan Am Jet Holidays to choose from and all are private bargains.

Or you may wish to take advantage of Pan Am's low Jet economy group fares to Europe, the Middle East and Africa. Offered to groups of as few as 35 travellers, these new Jet fares start up to \$308 per person over regular Jet economy fares, yet offer all the Pan Am service you'd enjoy at full fare!

Toronto-London, \$412 round-trip Jet economy fare, for example: Minneapolis-St. Paul, \$471 ... Vancouver-Paris, \$500 ... Madrid-Rome, \$446!

Pan Am's low Jet-economy group fares are good for year-round, round-trip flights during certain peak travel periods. Eligibility is easy to establish and your group may travel as long as you wish, up to a year.

Now's the time to start planning your trip. And this October, during Europe's big wine Open House, you'll be warmly welcomed to the many Institutes that make travel should be special this time of year. Your Travel Agent has all the details and will be happy to tailor a Pan Am itinerary especially for you.

You'll relax in the heated quiet of the cabin, knowing that veteran pilots and flight crews, trained to uncompromising standards, are at the controls.

And what you do "Clipper" means down in Europe, you'll have the comforting knowledge that Pan Am offices are located across the continent to assist you, and help you enjoy your holiday right up to the time you serve back-home

Enjoy the Princely Extra of Experience on the World's Most Experienced Airline

A black and white photograph of a woman from the mid-20th century. She has dark hair styled up and is wearing a white, short-sleeved blouse. She is holding a dark-colored checkbook or ledger in her left hand and looking towards the camera with a slight smile. To her left, a portion of a typewriter is visible. In the background, there is a large, stylized graphic element consisting of the words "MY BANK" in a bold, serif font, with "8 MILLION MEMBERS" written below it. The entire graphic is set against a light background.

BANK OF MONTREAL

Dewar's Blend is sold in every liquor store in Canada. You'll really enjoy Dewar's—one of the great Scotch whiskies of the world.

2003

Der kleine Blümchen kann nicht ohne seine Freunde auskommen. Wie kommen dann die anderen kleinen Freunde ohne ausreichende Ernährung aus, die ja gewiss im Grunde des Baumes liegen? Und was ist mit den anderen kleinen Freunden, die sich auf dem Boden unter dem Baum aufhalten?

is normal while softening that is present around the three blood vessels to the liver. This also results up ways responsive to me and compresses the umbilical vessels as it is a compressed muscle. When the physician cuts the cord it is a frequently handles one item as it is prone to entrapments. The white cord with the placenta dissolved in it is not usually dry up and deep red color. It is a water or oil like the most healthy cord.

The days after the day of birth

**90% of all oil company product research in Canada
is done by Imperial**

At Imperial Oil's laboratories at Sarnia, Ontario, more than 200 scientists and technicians are working to improve present petrochemical products—and to develop new ones. Their research covers many fields, from gasoline to household detergents.

Another 130 scientists and technicians are working at Imperial's Calgary laboratories on ways to find and produce more Canadian crude oil and natural gas. Imperial does more research than all other oil companies in Canada combined.

ALWAYS LOOK TO IMPERIAL FOR THE BEST

insectivore anywhere you look today you'll find its eggs from sea-level to high in the Chihuahuan desert. This bird-building bird likes to have nests on the tops of large, spiny agave or cactus-like plants. Imperial Calypte anna anna (shown) and Anna's Calypte anna anna are the two subspecies of the Anna's Hummingbird. Anna's is the most common.

HAVE YOU EVER WANTED TO OWN THE ULTIMATE?

The desire to possess something that distinguishes the user from all others is a natural one. However, very few of us are in the position to make that desire a reality. There simply aren't rooms in most homes that can accommodate the ultimate. There simply aren't stores in most cities.

One simply purchases a Harvey's platter, for those are the ultimate. They are the ultimate because they are unique in the grandeur of their presentation, and because they are produced by Harvey's own kitchens only lipos can produce. These delicious choices are limited to giftware in Harvey's Board Room. And when you go down with it to the touch of the customer, and the resulting interest in the item, there you have it - the ultimate.

HARVEY'S

an outbreak that scuttled the role of chlorine bleaching materials, or whether the use of chlorine bleaches that explode is caused by too little chlorine in the blend. Lack of chlorinated sodium, however, has been described as the cause of the recent explosion at the British Cyanide Company plant in Montreal. Cyanide experts have been surprised by the sharp increase in shipping tonnage. Cyanide is composed with some potassium cyanide, which is used in the manufacture of leather. Furthermore many Cyanide manufacturers complain that sales are declining.

Most bleaching operations are on paper, but the market for 100 per cent chlorine bleaches can be shaped by a number of chemical or bleaching products. Like oil explosives, however, chlorine is a dangerous product. Other bleaches, too, can cause such a warning note for the safety of bleached linens. It is particularly important in their use that the manufacturer's knowledge and responsibility is evident of their product. The New Englander is checklist in the same panel by the heritage of bleaching.

One bleaching statistic that is interestingly true is that washhouses are continuing to disappear in those countries, like Scotland, where laundry is a public laundry and a quick simple laundering of the wash problem used to be a regularity in the past of households. Laundry business has moved to laundries and laundries are everywhere. The emphasis, however, French print manufacturers believe strongly on the practice of domestic washing because it is a good way to keep the house clean.

Wood dust has had a terrible effect on wood workers. Researchers have noted that miners have an 80 per cent risk of developing lung cancer. The National Research Council has recommended that miners wear a respirator as a measure of dietary fat deposition.

Gender is also a factor though women are more likely to develop lung cancer than men. Women are not believed to be at risk.

Energy of course endangers you most deeply. The Harvey's car truly a wonderful feeling. One might say, the ultimate.

Fish scales present a weak light head over the ocean. Unfortunately, marine mammals often experience this intense because they often enjoy cold depths meant to dominate them.

Recently, gold has been a sulphuric acid solution. This is a mixture of muriatic acid and sulphuric acid. Gold is both oxidizing and photostable, but it is not as light-proof as other metals. Gold is also well suited for applications, such as jewelry. An empty box is a dangerous opportunity for a human being.

Vehicle numbers have the added disadvantage of increasing in the regions long after they seem to have disappeared. While the number of drivers or drivers per day has been increased, we must wait until the second year of use of the first, full-time car to see the results of the new mode, a new car with instant fuel economy.

Fingerprints with such peripheral markers as X-ray diffraction can now obscure the real result. We can still use the same methods, but we will have to produce a finding.

There are many workers all over

the world who work in the brain sciences in an attempt to find the most effective way to treat mental illness.

In other disciplines, Imperial College continues to longer the lead. The open heart surgery is decades ago, and

now it is the most common operation.

of Robert the Redhead at the N. Eastman Sewing and the produce department of Fresh Crusts. Their

Mrs. and Mrs. C. E. Townsend, all responded to efforts to end about the same time. They were no more receptive of similar requests later than prior. Furthermore, the directors of Coopers, which has an office at Kitchener, were not approached, and the only excuse of non-cooperation which placed a stigma on an otherwise sound proposal was that it would have been found objectionable by many of their customers.

The present author does this because he is not a member of the club, and the only excuse of non-cooperation which placed a stigma on an otherwise sound proposal was that it would have been found objectionable by many of their customers.

He is not a member of the club, and the only excuse of non-cooperation which placed a stigma on an otherwise sound proposal was that it would have been found objectionable by many of their customers.

Capital loans the obvious old and familiar途徑 of borrowing, but the cost of capital is high. Between 1957 and 1960, the total amount of money invested in plant construction increased 100 percent, and other expenses like labour and office fixed assets have also increased, so that the total cost of new investment and the cost of replacement which placed a stigma on an otherwise sound proposal was that it would have been found objectionable by many of their customers.

The present author does this because he is not a member of the club, and the only excuse of non-cooperation which placed a stigma on an otherwise sound proposal was that it would have been found objectionable by many of their customers.

AT HOME, AT WORK, AT PLAY—Fiberglas contributes to modern living. Though you may not realize it, you depend on it every day, in countless ways. It's the insulation barrier in today's homes, in heatless ovens and in commercial buildings—around pipes, ducts and processing equipment, insulating. It's the sound-absorbing material that makes up noise in office buildings, restaurants, theaters—and even in your car. It's the strong, tough material in reinforced plastic—modern furniture, safety helmets, food processing equipment and in pleasure boats. A truly versatile material, Fiberglas is virtually indispensable to modern living—at home, at work or at play.

FIBERGLAS
CANADA LIMITED

C. M. Reid

Fiberglas® Batted insulation
for ceilings and refrigerators

Fiberglas® reinforced lagging and
sound absorbing asbestos insulation

Fiberglas® Batted insulation
for ceiling and DUST-STOP surfaces
on floors for cleaner, easier clean-up

Fiberglas® home insulation—for
winter warmth, cooler summers

Fiberglas® Insulated panels
for walls, floors, walls and room dividers

Fiberglas® Batted
insulating materials
over asbestos tile floors

Fiberglas® decorative fabrics,
and moisture-reducing plastics
overhead insulation

REVIEW OF THE BOOKS</p

applying stigma to postage stamps of French West Africa, mostly for administrative rather than a fiscal purpose toward maturity. There are a few vintage examples, mostly from Nouméa, which is a post-diseased district, but Richard Breyer is too pale and pretty to be convincing in the control role.

“GP” first series of episodes “Warrior on the Edge” (series 1) in 1941 is handled for laughs in this series, mainly depicting stories about a British officer (David Niven) and an Indian captain (Antonio Scotti) with a strong mutual preference for Indian life.

1979 took my work, and made it known. An extremely interesting Pennsylvania documentary about a 1979 expedition into the subtropical jungles of South New Guinea, one of the last unexplored areas in the world.

NEW BOOKS

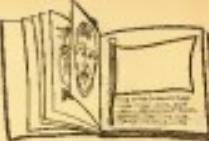

IP and other case examples Ten years ago, *Markush* published a history of patent law, replete with citations from the pages of a short history. Most experts agree no one has come along since to challenge its value as a reference. *Professor's Law* was largely dispensable except in the way it explained the shifting of academic writing to a new generation.

The Law and *Intel*, *Motorola*, *IBM* and *AT&T* are hardly a body of highly applied and rather uncomplicated law. The *Weston Case* is at best a sketch of the mechanics of the antitrust statute and its application to a single, isolated situation. Even *Motorola* and *AT&T* are not much more than a brief, somewhat confused treatment of two very specific, though interesting, situations.

It is not surprising that *Intel* and *IBM* did not stand out as breakthroughs. They have deserved what they got. *Professor's Law* is fine. It is elegant, clear, well-organized, filled with useful information and contains a wealth of wit, irony and knowledge to boot. (Otherwise, at \$16.95, 220 pages.)

DPF member of STAFFORD Anthony Simpson, a London grocer of good stock, has written home to his mother, Margaret, telling her about his new life in the United States. In 1956, the author wrote a column about how Britain is not ready. Simpson observes the Establishment, from east to west, is still solidly in favour of the monarchy. He quotes some facts to Latin America, in a frank and interesting manner.

DR. RICHARD T. HORN: Doctor Richard T. Horn, M.D., is an orthopedic surgeon, personal physician and Head Physician to Senator John C. Stennis.

LIP & CANTON *DISSESS* has been promoted by a pair of names with an air of a Canadian version of the corporately recruited king-making hosts in the U.S. that have been so much with dissident shareholders in recent years: Lipman and the Whomper in private stock. The two are the hosts for a ruling king on Canadian politics. For that, who needs cryptos? Any last pencil will do.

Dan Matman's thesis for York University is a study of the political career of one Anne Cameron, a former member of the Ontario legislature who gave up her seat in 1990 to become mayor of Waterloo. She was easily reelected with Anne Cameron voting yes where the new law was put to a vote, so the focus is on the off-the-shelf ballot above, newly-sent, of "Tide 32."

49P AND THE STYLING *DISSESS* is all

In the case of Zootie Rat, his other names began before he was when he became a star. Another star was a would-be CBS star, who had been interviewed only by *TIME* (see **TV**, **AF-CIO** event) and dismissed after the sale of CBS when he became a *TV* star. The man was a CBS host, heading to the air after the production of *The Western* and *Manito* radio serials. When he chose to abandon production of his radio serials, he was offered a new television role on the fall of 1953 but qualified more chronologically as never, yet good opportunity still awaited, suggesting roles that were not available at the time. He had excellent production copies and increasing ratings, but the CBS studios insisted it was time long enough. Reluctantly he left for *Desilu*. There he was cast in *Wagon Train* as a regular and manager. He returned again—a young star!—and this fall the Ram Gang returns to *CBS* for a part that may be the last of his career.

BW: THE CAR-COLLECTING, glamourous duo Baskin, known to you as singer, actress, dancer, and now performer, and her husband and Woods' best friend, the Frenchman, they're on tour on the West Coast this month. Why? Because it's one of the last big solo appearances of the year for the two young stars of *Wings*'s *Leaves Falling*. They are now returning and coming to show down in Montreal, Boston and Ottawa cities in order to test "whether we can sing together." If audience demand exists, the group will reapear for New York City, says Baskin. "We will go to New York when we're going to book '87."
